

NTT Digital Launches "scramberry WALLET SUITE"

— Easily Integrate Digital Wallet Functions into Smartphone Apps and Web Services —

Tokyo, Japan, August 27, 2024 --- NTT Digital, Inc. ("NTT Digital") announced today that it has launched "scramberry WALLET SUITE", a software integration service that modularizes various functions, including digital wallets, and provides them to businesses.

In recent years, various products and services have been digitized, and there is a global movement towards creating a secure and safe digital environment. Currently, businesses in various sectors are providing services independently, but there is a growing trend towards deeper collaboration among businesses to offer consumers more convenient services. As a means to achieve this, blockchain technology is gaining attention.

The various functions of a digital wallet are provided as a service (Wallet as a Service).

This service provides businesses that offer smartphone applications and web services with the necessary functions for digitalization, such as digital wallets, in the form of modules through APIs and SDKs. Through the provision of this service,

NTT Digital aims to further advance the digitalization of products and services, promote collaboration among businesses, and support the delivery of more convenient services for consumers.

Businesses that utilize this service can integrate it into their own services, enabling them to offer digital wallet functions while maintaining their existing brand identity. Additionally, with regular updates for new features and security, businesses can continue to use scrambleberry WALLET SUITE with confidence, free from the complexities of web3-related system development investments, key management, and chain updates.

Users of smartphone apps and web services that incorporate this service will not need to be conscious of performing web3-related actions, such as connecting wallets. This allows them to seamlessly trade crypto assets and NFTs while maintaining their familiar digital experience.

Regarding Sales Collaboration for Creating Use Cases Utilizing NFTs

NTT Digital has reached a basic agreement with CryptoLab Inc., cryptolier Inc., and SBINFT Inc. on the introduction and sales collaboration of this service. Together with these companies, NTT Digital will work on creating use cases that utilize NFTs and other digital assets across various industries.

Future Developments

NTT Digital will globally enhance the deployment of services for businesses. This service, with global expansion in mind from its launch, will be tailored to customer needs and comply with regulations in each country as its availability expands.

Additionally, NTT Digital plans to launch a Node Provider/Indexer service, which provides functions for writing and reading information on the blockchain, within this fiscal year, with pre-sales starting today.

NTT Digital will continue to offer various business-oriented services both domestically and internationally, promoting the social implementation of cutting-edge digital technologies.
